

WORTH MOUNTAINS OF GOLD

During Change of Life, says Mrs. Chas. Barclay

Granville, Vt.—"I was passing through the change of life and suffering from nervousness and other annoying symptoms, and I can truly say that Lydia E. Pinkham's Vegetable Compound has proved worth mountains of gold to me, as it restored my health and strength. I never forget to tell my friends what Lydia E. Pinkham's Vegetable Compound has done for me during this trying period. Complete restoration to health means so much to me that for the sake of other suffering women I am willing to make my trouble public so you may publish this letter."—Mrs. CHAS. BARCLAY, R.F.D., Granville, Vt.

No other medicine for women's ills has received such wide-spread and unqualified endorsement. No other medicine we know of has such a record of cures of female ills as Lydia E. Pinkham's Vegetable Compound.

For more than 30 years it has been curing female complaints such as inflammation, ulceration, local weakness, fibroid tumors, irregularities, periodic pains, backache, indigestion and nervous prostration, and it is unequalled for carrying women safely through the change of life. It costs but little to try Lydia E. Pinkham's Vegetable Compound, and, as Mrs. Barclay says, it is "worth mountains of gold" to suffering women.

When Plainfield Boomed

By M. QUAD

Copyright, 1910, by Associated Literary Press.

For years and years the other inhabitants of the village of Plainfield had spoken of Simon Jones as Simple Simon. He was an old bachelor and lived alone. He had no opinions on politics or religion; he made his living by working for other folks by the day and by raising crops on his two acres of land. When any one asked why Simon was simple the only reason given was that he had once been offered \$500 for his place and refused to take it.

All of a sudden at a particular date it was discovered that Plainfield had a mineral spring, a pirate's cave and a hill from which an Indian maiden had leaped to her death. Result—a boom; result—the organization of the Plainfield Hotel and Land syndicate. It purchased the crest of Indian Maiden hill one day and set about the erection of a summer hotel the next. Of course property went up—all but Simple Simon's two acres. The land company expected to get that at the same old price when it got around to make the offer. The hotel land and Simple Simon's joined for a distance. When the hotel was completed its southern veranda was within ten feet of the line.

In due time, which was when the syndicate got good and ready, it offered Simple Simon \$400 for the land. He shook his head. Then \$500 was offered, and when he refused it he was called an idiot. The hotel opened with another boom. Among its first guests were Professor Chisholm and a Mrs. Ripton. He was a naturalist and she a poet. He was a bachelor and she a widow. They took to each other. One July day, when there were sixty-five guests in the hotel and the syndicate was expecting every minute that Simple Simon would call and accept their offer, that individual appeared in front of the south veranda and erected a rude bench. When he had finished the job and departed the professor and the poet descended the steps and sat on the bench to cool. They thought very kindly of Simple Simon for putting it there. Next morning it was noticed that the bench was occupied by two beehives, and the industrious insects could be seen flying in and out as they earned their wages.

Professor Chisholm had been anxious to deliver a lecture on natural history. Here was his opportunity. He offered the widow his arm, and the couple walked down the steps and over to the beehive. The professor cleared his throat and began to talk. He had a cane in his hand and flourished it as he talked. He stated that the beehive had been known for 10,000 years. Egypt used to be fairly swimming in milk and honey until the trust got in and raised the price.

"The bees must not be mistaken for the bumblebees. The latter was only a big jaffer of a bee, content to sit on the fence all summer and die off at the coming of freezing weather."

"And now, ladies and gentlemen," said the professor as he stepped back, "we come to the hive itself. The beehive is an emblem of industry."

Here the professor, carried away with his enthusiasm, tapped on one of the hives with his cane. The bees responded nobly. They had been interrupted in their industry and now poured forth to see what was up. The first half dozen landed on the naturalist, and as he began to execute a barn dance there was hearty applause from the veranda. The next assortment hit the widow, and everybody was prepared to applaud her when the insects began to come thicker and to look higher, and the circus began. There were shrieks, yells, oaths and a rush for shelter, but a bee can follow where a human being can squeeze through. They followed. They buzzed. They were emblems of industry as well as the hives. Hardly a person in the hotel, from manager down to dishwasher, escaped. It took half a day of smothering and smothering and using brooms and dusters to clear the house, and the guests began to depart with the bees. Inside of two days the last had vanished. The poetess and the naturalist were among the last, and she faced him with swollen eyes and said:

"Professor, what a fool you were to tap on that beehive!"

"Widow, what a silly thing you were to write a poem on bees!" he retorted as he got his mouth open for the first time for hours.

And meanwhile what about Simple Simon? Men had rushed to him and threatened him, but the bees were his and on his land. He did not propose to remove them, and they did not go until his two acres had been sold for a thousand dollars and the cash was in his hand. He just grinned and looked simple, and they hurried up to give him his money. When the property was transferred and the industrious bees and their emblems had been pitched into the pond the hotel began advertising for guests. No one responded. It was closed to reopen another season, but it still stood empty. It is no longer there today. The boom came and boomed, and then the bottom dropped out. Today the mineral spring still bubbles, and they will point you out the spot where the Indian maiden leaped to her death and where the pirate made his murderous lair, but Plainfield booms no more. Now and then an inhabitant will wake up to say that Simple Simon was the only fool who made a dollar out of the beehive, but he is asleep again by the time you ask for details.

BLIND OBEDIENCE.

Did as the Judge Told Him and Was Well Paid For It.

A gentleman had a head gardener who never thought of having a holiday or missing a day from work and no one would have been surprised by his asking him if he could have "mixt Friday off."

His request was immediately granted, but on the Saturday he did not show up, and a week went past, and then a fortnight, and still no sign of Mike. The gentleman reluctantly employed another man in Mike's place.

About three months afterward he was surprised on going into the grounds to find Mike at work just as if nothing had happened.

"Where have you been, Michael?" he asked.

"Well, sorr, it's like this: You remember the day you let me off? I had to appear at the court as a witness. When I gets there I sees the old gint with the wig on 'is head and 'is specs on the tip of 'is nose."

"Michael Doyle," sez 'e.

ACCUSED AS A WITCH.

Tried For "Conversing With the Devil in the Form of a Cat."

Jane Wenham was indicted at the Hertfordshire assizes on March 4, 1712, for "conversing with the devil in the form of a cat," under the provisions of the act of 1604, repealed in 1736. Her prosecutors wished to have her also indicted for practicing witchcraft to the harm of Ann Thorn, a servant girl sixteen years old, but this was not allowed, although evidence was produced at the trial to show that injury had been done the victim by means of crooked pins and by placing cakes and cats' hairs in Ann Thorn's pillow and how the prisoner had caused the death of some cattle simply by walking through a turnip field.

The jury brought her in "guilty," and Mr. Justice Powell passed sentence of death, but took steps to quash the verdict. Wenham's prosecutors published an account of the case, but their arguments were pulverized by scientific men. Jane Wenham herself was liberated and taken under the protection of Colonel Plummer, who gave her a cottage, and we are told by Dr. Hutchinson that in 1730 the whole country was fully convinced of her innocence.—London Spectator.

Do You Know This Flower?

Among the guests at a summer hotel in Vermont was a scientist from Boston, noted for his botanical researches, and a woman desirous of impressing him with her stores of general knowledge; also she affected a deep interest in all matters pertaining to botany.

"I suppose," said the woman one day, "that you find almost all the mountain flowers around here?"

"I find a great many," said the scientist.

"There's one species of flower," she continued, "of which I've read as always being on the hills, and I've always wanted to see it. Perhaps you can pick me some."

"And what is this flower, madam?"

"The purple gloaming," you know. I should dearly love to possess some!"—Mississippi Journal.

Watch Your Shoulders.

When standing before a looking glass notice if your shoulders are the same height. Generally the right is higher than the left. The reason for this unevenness lies in the way one sits. You get into a comfortable chair at your desk, and at once you rest your right elbow on the arm of your chair or your desk, thus throwing one shoulder higher than the other. This is especially the case where one writes a great deal. When you notice that one shoulder is higher than the other the time to do is to change your way of sitting at your desk. Two simple exercises will be beneficial. The arm of the lower shoulder should be extended upward, the hand grasping a dumbbell. That of the higher shoulder should be lowered and made to support a heavy weight.

Wet Weather and Camels.

Camels are very sensitive to moisture. In the region of tropical rains they are usually absent, and if they come into such with caravans the results of the rainy season are greatly feared. The great humidity of the air explains the absence of the camel from the northern slopes of the Atlas and from well wooded Abyssinia. This sensitiveness expresses itself in the character of different races. The finest, most noble looking camels, with short silk-like hair, are found in the interior of deserts, as in the Tanagra region in north Africa, and they cannot be used for journeys to moist regions. Even in Fezzan, south of Tripoli, the animals are shorter and fatter, with long coarse hair, and in Nile lands and on coasts it is the same. These animals, too, are less serviceable as regards speed and endurance.
